

Abrir no IntelliJ Community

Configurar o Java 17

The screenshot shows an IDE with a project structure on the left and a code editor on the right. The project structure includes a package named 'Servidor' and a class named 'ApplicationServer'. The code editor displays the 'ApplicationServer.java' file, which contains a 'main' method. A context menu is open over the code, showing options like 'New', 'Copy', 'Paste', 'Find Usages', 'Refactor', 'Bookmarks', 'Browse Type Hierarchy', 'Reformat Code', 'Optimize Imports', 'Delete...', 'Override File Type', 'Build Module', 'Run', 'Debug', and 'More Run/Debug'. The 'Run' option is highlighted.

The screenshot displays the IntelliJ IDEA IDE interface. On the left, the 'Project' tool window shows the 'rmi-project' structure, including 'src' and 'out' directories. The 'src' directory contains 'Cliente' and 'ServiceInterfaces' subdirectories. The 'Cliente' directory contains 'ApplicationClient' and 'OrganizeService' subdirectories. The 'ServiceInterfaces' directory contains 'ServiceApp' and 'ServiceImpl' subdirectories. The 'rmi-project.iml' file is also visible. The 'External Libraries' and 'Scratches and Consoles' tool windows are also present.

The main editor window shows the 'ApplicationClient.java' file. The code is as follows:

```
package Servidor;

import ...

no usages Jeferson Junio Menchik
```

A context menu is open over the code, showing various actions. The 'Run' option is highlighted, which is represented by a green play button icon. Other options include 'New', 'Cut', 'Copy', 'Paste', 'Find Usages', 'Analyze', 'Refactor', 'Bookmarks', 'Browse Type Hierarchy', 'Reformat Code', 'Optimize Imports', 'Delete...', 'Override File Type', 'Build Module', 'Debug', and 'More Run/Debug'.

The bottom status bar shows the terminal output, which is currently empty. The terminal title is 'Terminal: Local (2)'. The bottom right corner shows the file encoding as 'UTF-8' and the file size as '4 spaces'.
